Akoizo Original Practice - Form 1

Division C | Botany | 50-minute written practice

Original Akoizo curriculum practice. This is not a historical tournament paper. Written build, CAD, lab and communication exercises supplement real practical preparation.

Name: _____ Date: _____

1. (2 points) NPP equals…

Unit: Botany, evidence, and ecosystem importance.
Worked-case data: A plant community fixes 100 carbon units and its producers respire 40 units over the same interval. Calculate NPP.

A. Gross production minus producer respiration

B. Gross production plus all respiration

C. Only nighttime growth

D. Total ecosystem carbon storage

Answer: _____

2. (2 points) Higher water potential: -0.4 or -0.8 MPa?

A. -0.4 MPa

B. -0.8 MPa

C. They are identical

D. Neither can be compared

Answer: _____

3. (2 points) Released photosynthetic oxygen originates from…

Unit: Photosynthesis, carbon fixation, and plant biochemistry.
Worked-case data: A leaf fixes 12 relative carbon units and releases 4 through the specified respiratory balance. What is net gain?

A. Water

B. CO_2 directly

C. Glucose only

D. Nitrogen gas

Answer: _____

4. (2 points) Hydroponic roots still need…

Unit: Horticulture, aquatic systems, medicine, and materials.
Worked-case data: Two irrigation treatments produce the same growth index, but one uses twice the water. What else is needed to choose a management approach?

A. Oxygen and suitable nutrient conditions

B. No oxygen

C. Only pure water forever

D. No selective membranes

Answer: _____

5. (2 points) Guard cells regulate…

Unit: Roots, stems, and leaves.
Worked-case data: A leaf closes its stomata during dry conditions. Predict one benefit and one cost.

A. Root hair length only

B. Stomatal opening

C. Every xylem vessel directly

D. Pollen chromosome number

Answer: _____

6. (2 points) The example most strongly supports…

Unit: Major plant groups and comparative identification.
Worked-case data: A specimen has parallel leaf venation, floral parts in threes, and scattered stem bundles. Identify the supported broad group.

A. Every gymnosperm

B. Monocot

C. Moss

D. Fern

Answer: _____

7. (2 points) Do all plants directly fix atmospheric nitrogen?

Unit: Plant ecology, nutrient deficiencies, and disease.
Worked-case data: Older leaves yellow first, but soil is dry and no tissue analysis exists. Is nutrient deficiency established?

A. Only every woody stem

B. No

C. Yes

D. Only every green leaf

Answer: _____

8. (2 points) Phloem flow is best described as…

Unit: Plant cells, tissues, and vascular organization.
Worked-case data: A mature leaf exports sugar to a growing root. Identify source, sink, and transport tissue.

A. Always upward

B. Only from roots to leaves

C. Source to sink

D. Always downward

Answer: _____

9. (2 points) Expected recessive phenotype in Aa x Aa with complete dominance?

Unit: Life cycles, flowers, seeds, and biotechnology.
Worked-case data: Track ploidy in the standard angiosperm pathway: diploid sporophyte, spore, gametophyte, gamete, zygote.

A. 3/4

B. All offspring

C. 1/4

D. 1/2

Answer: _____

10. (2 points) Similar traits can arise independently through…

Unit: Plant evolution, fossils, and diversity.
Worked-case data: Two modern lineages share a vascular-tissue ancestor. Does one living lineage have to be the ancestor of the other?

A. A display stretch

B. A universal ladder

C. Convergence

D. Only identical ancestry

Answer: _____

11. (4 points) Calculate the example NPP.

Unit: Botany, evidence, and ecosystem importance.
Worked-case data: A plant community fixes 100 carbon units and its producers respire 40 units over the same interval. Calculate NPP.

Answer: _____
_____
_____

12. (4 points) Predict movement from -0.2 to -0.5 MPa.

Answer: _____
_____
_____

13. (4 points) Calculate the example net gain.

Unit: Photosynthesis, carbon fixation, and plant biochemistry.
Worked-case data: A leaf fixes 12 relative carbon units and releases 4 through the specified respiratory balance. What is net gain?

Answer: _____
_____
_____

14. (4 points) Distinguish hydroponics and aquaculture.

Unit: Horticulture, aquatic systems, medicine, and materials.
Worked-case data: Two irrigation treatments produce the same growth index, but one uses twice the water. What else is needed to choose a management approach?

Answer: _____
_____
_____

15. (4 points) Explain the stomatal tradeoff.

Unit: Roots, stems, and leaves.
Worked-case data: A leaf closes its stomata during dry conditions. Predict one benefit and one cost.

Answer: _____
_____
_____

16. (4 points) Why avoid one-trait identification?

Unit: Major plant groups and comparative identification.
Worked-case data: A specimen has parallel leaf venation, floral parts in threes, and scattered stem bundles. Identify the supported broad group.

Answer: _____
_____
_____

17. (4 points) Why can older leaves show deficiency first?

Unit: Plant ecology, nutrient deficiencies, and disease.
Worked-case data: Older leaves yellow first, but soil is dry and no tissue analysis exists. Is nutrient deficiency established?

Answer: _____
_____
_____

18. (4 points) Why are lignified xylem walls useful?

Unit: Plant cells, tissues, and vascular organization.
Worked-case data: A mature leaf exports sugar to a growing root. Identify source, sink, and transport tissue.

Answer: _____
_____
_____
