repair-case. (6 points) Authored written substitute for unavailable source material: Solve this case and explain your reasoning: Puzzle A offers 100 points with a 0.9 estimated solve probability in 3 minutes; B offers 200 with 0.3 probability in 6 minutes. Compare expected points per minute as a planning aid.

reasoning: A gives 100 x 0.9 / 3 = 30 expected points per minute.
B gives 200 x 0.3 / 6 = 10 expected points per minute.
Estimates are uncertain; revise them if new constraints make B easier or actual scoring differs. (3 points).

conclusion: A is a reasonable initial priority under these assumptions; the ratio is a planning heuristic, not a score guarantee. (3 points).
