Greenbrier Invitational - Repaired practice edition - Answer key

Division C | Disease Detectives | Repair appendix

This appendix contains authored replacements and supplied written alternatives. It does not reconstruct unpublished historical material. For the listed item IDs, use this appendix instead of the archived wording and key.

ANSWER KEY - Review only after submitting.

33. (6 points) Authored replacement for source item Question 33: Solve this case and explain your reasoning: Investigators interview every attendee on a banquet roster after an outbreak and compare illness by food consumed. Identify the design.

reasoning: Selection is based on banquet attendance, not illness status.
Exposure and outcome are reconstructed for the full defined cohort.
Food-specific risks and RR can be estimated if ascertainment and denominators are adequate. (3 points).

conclusion: This is a retrospective cohort, despite collecting the information after the event. (3 points).

54. (2 points) Authored replacement for source item Question 54: Define “Incubation period” in the context of Disease Detectives.

answer: Time from infection to symptom onset. (2 points).

55. (4 points) Authored replacement for source item Question 55: Distinguish infection and reporting dates.

Unit: Epidemiological background and natural history.
Worked-case data: In a closed group of 100 initially well people, 10 develop the defined illness during one week. Separately, 15 of 100 residents have an existing chronic condition on survey day.

answer: Infection is acquisition of the agent; reporting occurs after detection and administrative processes and can be substantially later. (4 points).

69. (2 points) Authored replacement for source item Question 69: Which measure concerns new cases?

Unit: Epidemiological background and natural history.
Worked-case data: In a closed group of 100 initially well people, 10 develop the defined illness during one week. Separately, 15 of 100 residents have an existing chronic condition on survey day.

A. Reporting delay

B. Incidence

C. Point prevalence

D. Mean disease duration

Correct: B
