**repair-case. (4 points) Authored written substitute for unavailable source material: Explain the evidence supporting your answer, including the calculation or comparison.**

Unit: Calibrate a Division B salinometer.
Worked-case data: 4.0% standard: Immersion is 9.8 cm. 6.0% standard: Immersion is 9.6 cm. Unknown: Immersion is 9.7 cm at the same temperature.
Separate investigation observations:
4.0% standard: Immersion is 9.8 cm.
6.0% standard: Immersion is 9.6 cm.
Unknown: Immersion is 9.7 cm at the same temperature.

answer: The unknown lies halfway between the two nearby calibration depths. Estimate halfway between 4.0% and 6.0%. Report about 5.0% mass/volume; real calibration curves may not be perfectly linear. (4 points).
